DETAILED ACTION

Specification

1. The abstract of the disclosure is objected to because at the last line of the abstract, the word "be" should be inserted after "may". Correction is required. See MPEP § 608.01(b).

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 3. Claim 4 is rejected under 35 U.S.C. 102(b) as being anticipated by JP 8-114575, herein referred to as JP '575.

JP '575 performs capillary zone electrophoresis using a carrier buffer solution (2) containing SDS, wherein both end of the capillary tube (1) are soaked in jars containing said buffer solution (2) (see Figure 1 and the attached English abstract). A voltage is applied across both ends of the capillary tube (1) to cause the sample to migrate in a medium suitable for capillary electrophoresis (see Figure 1; the attached English abstract; and the entire JP '575 document). Since JP '575 teaches the limitations of the instant claims, the reference is deemed to be anticipatory.

4. Claim 4 is rejected under 35 U.S.C. 102(b) as being anticipated by Novotny et al, U.S. Patent 5,459,272.

Application/Control Number: 09/757,632

Art Unit: 1753

Novotny et al performs capillary zone electrophoresis with a mobile phase buffer containing SDS (see col. 3, lines 50-57; and col. 23, lines 43-61). An operating voltage of 25 kV is used (see col. 3, line 56). Since Novotny et al teaches the limitations of the instant claims, the reference is deemed to be anticipatory.

Claim Rejections - 35 USC § 103

- 5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 6. Claims 1 and 2 are rejected under 35 U.S.C. 103(a) as being unpatentable over Hu et al, Journal of Chromatography A, 717, (1995), pages 33-39.

In section 3.2 at page 35, Hu et al performs capillary zone electrophoresis with a sample buffer having an SDS concentration of 35 mM. On page 36, at the first paragraph of the first column, another capillary zone electrophoresis is performed using an SDS concentration of 3.5 mM in the sample buffer. Hu et al teaches the limitations of the instant claims other than the difference which is discussed below.

Hu et al does not specifically recite "adding" the SDS to the sample to be electrophoresced. However, it would have been obvious to one of ordinary skill in the art at the time the invention was made to have added to have added the buffer containing the SDS to Hu et al's sample to be electrophoresced so that a sample that is ready for analysis could be obtained.

Application/Control Number: 09/757,632

Art Unit: 1753

7. Claims 1 and 2 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kenndler et al, Journal of Chromatography, 545, (1991), pages 397-402.

Kenndler et al performs capillary zone electrophoresis using protein samples containing SDS at a concentration of 0.05% by weight (i.e., 1.7 mM) and 0.1% by weight (i.e., 3.5 mM) (see page 398; and Figure 1 at page 399). Kenndler et al teaches the limitations of the instant claims other than the difference which is discussed below.

Kenndler et al does not specifically recite "adding" the SDS to the protein sample to be electrophoresced. However, it would have been obvious to one of ordinary skill in the art at the time the invention was made to have added to have added the buffer containing the SDS to Kenndler et al's protein sample to be electrophoresced so that a sample that is ready for analysis could be obtained.

Allowable Subject Matter

- Claim 3 is allowed.
- 9. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Alan Diamond whose telephone number is 703-308-0840. The examiner can normally be reached on Monday through Friday, 5:30 a.m. to 2:00 p.m. ET.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Nam Nguyen can be reached on 703-308-3322. The fax phone number for the organization where this application or proceeding is assigned is (703) 872-9306.

Art Unit: 1753

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is 703-308-0661.
